

CADDRAFT™

*An entry level drawing
and drafting package.*

CADDRAFT is a user-friendly entry level software package for creating, editing and plotting two-dimensional designs. CADDRAFT is easy-to-use and requires no formal training.

CADDRAFT is menu driven, and features a user-selectable grid system, allowing designs to be displayed on the screen using a cursor control device such as a mouse or a digitizer. Designs consist of combinations of lines, arcs, circles, rectangles, symbols and text.

All CADDRAFT commands are displayed on the screen in menu form, with options displayed as submenus. The creation and modification of a design is greatly assisted by real-time "dragging" of

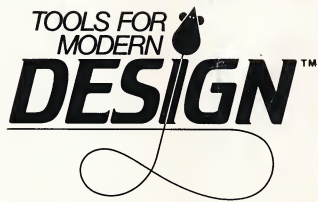

symbols and elements, "rubber-banding" of lines and output scaling—features usually associated with large-scale CAD systems.

CADDRAFT allows the designer to place components on up to 10 different layers, e.g., walls on layer 1, furniture on layer 2, and piping on layer 3. Each layer can then be viewed individually or in combination with other layers. Portions of the design can be differentiated by specifying different line types or colors.

CADDRAFT also simplifies the repetitive use of symbols or components, making the creation of any design that contains these elements easier and quicker. Once a symbol has been created, it can be stored in a symbol

library for incorporation into subsequent designs. Any change to a library symbol is instantly reflected in each usage of that symbol.

Specifications

CADDRAFT can support designs with up to:

- 10 layers, 5,000 data points
- 3 line types
- 3 colors
- Up to 60" per side drawings with .001" accuracy

Hardware Requirements

CADDRAFT runs on an IBM PC or compatible personal computer with the following minimum configuration:

- Two 5.25-inch double-sided disk drives (fixed disk recommended)
- IBM color/graphics board
- Color monitor
- 320K RAM
- RS-232 serial port
- Cursor-control device (e.g., a mouse or digitizer)

Price

CADDRAFT: \$495
